

Test

Q1) What is JavaScript? Explain its features.

Solu:- JavaScript is the scripting language used for the built interactive and Dynamic Webpages

Features:-

Fast Execution, Object Oriented Programming Language, Platform Independent, We have no need to declare datatypes, Used for frontend and Backend Both

Q2) What are variables in JavaScript? Explain var, let, and const.

Solu:- Variables are used to store the data

Var:- We can Redeclare it

Let:- we can not redeclare it

Const:- we cant change value after declaration

Q3) What are data types in JavaScript? Explain different types.

Solu: Data types are used declare type of data stored in variables

Number :- number Datatype use for the store numerical datatype eg.let a=156

String:- string use for the store the String data eg. Let a="Omkar"

Boolean:- Boolean datatype use for the store true and false

Q4) What are operators in JavaScript? Explain types of operators.

Solu:- Operators are Symbols Used for the Perform Operations

Arithmetic:- +, -, *, /, %

Assignment:- =, +=, -=, *=, /=, %

Unary :-PreIncrement, PostIncrement, PostDecrement, PreDecrement

Relational:- ==, ===, !=, >, <, <=, >=

Logical:- &&, ||, !

Bitwis :- &, |, ^, <<, >>

Q5) What is the difference between == and === in JavaScript?

Solu:- == :- work on the only directly data here is not any limitation related to datatype

Eg. a=5, b="5" answer will be true

=== :- It only work on the similar datatypes or check datatypes

Eg. a=5, b="5" answer will be False

Q6) What is the difference between let and const?

Solu:- If we declare the variable using let a=5 then we can change the value a=6
But If we declare const a=5 then we can't change it a=6

Q7) Number System Decimal to Binary

Convert decimal number **12, 14, 16, 18** into binary.

No	16	8	4	2	1
12	0	1	1	0	0
14	0	1	1	1	0
16	1	0	0	0	0
18	1	00	0	1	0

Q8) Number System Binary to Decimal

Convert binary number **1010, 1111, 1100, 0111** into decimal.

Ans	8	4	2	1
10	1	0	1	0
15	1	1	1	1
12	1	1	0	0
7	0	1	1	1
