

1) Ladder If-Else

Q1) Grade system based on marks (A, B, C, Fail).

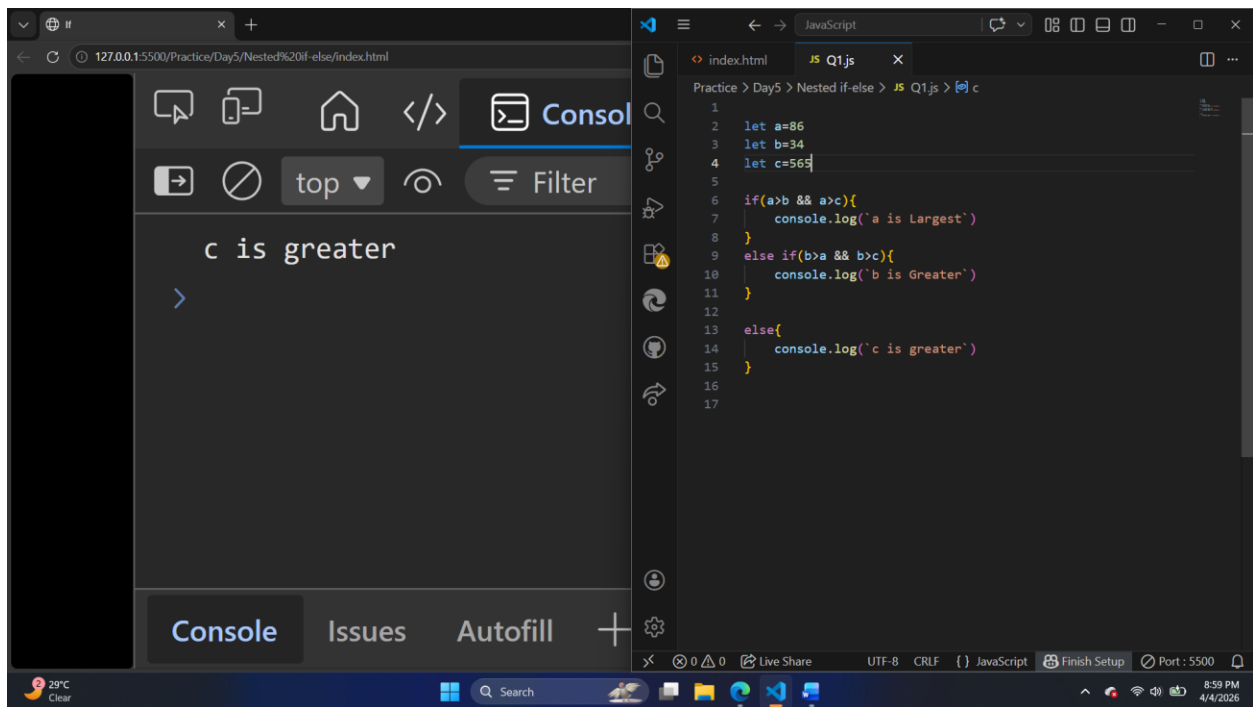

Q2) Check number: positive, negative, or zero.

The screenshot shows a web browser on the left and a VS Code editor on the right. The browser's address bar shows the URL `127.0.0.1:5500/Practice/Day5/Nested%20if-else/index.html`. The console displays the output `Positive`. The VS Code editor shows a JavaScript file named `Q1.js` with the following code:

```
1 let marks=86
2
3
4 if(marks>0){
5     console.log('Positive')
6 }
7 else if(marks<0){
8     console.log('Negative')
9 }
10
11 else{
12     console.log('Zero')
13 }
14
15
```

Q3) Find the largest among three numbers.

The screenshot shows a web browser on the left and a VS Code editor on the right. The browser's address bar shows the URL `127.0.0.1:5500/Practice/Day5/Nested%20if-else/index.html`. The console displays the output `c is greater`. The VS Code editor shows a JavaScript file named `Q1.js` with the following code:

```
1 let a=86
2 let b=34
3 let c=56
4
5
6 if(a>b && a>c){
7     console.log('a is Largest')
8 }
9 else if(b>a && b>c){
10    console.log('b is Greater')
11 }
12
13 else{
14    console.log('c is greater')
15 }
16
17
```

Q4) Check age category (Child, Teen, Adult, Senior).

The screenshot shows a web browser on the left and a code editor on the right. The browser's console displays "Category: Adult". The code editor shows a JavaScript file named "JS Q1.js" with the following code:

```
1 let age = 45
2
3 if (age >= 0 && age <= 12) {
4   console.log("Category: Child");
5 }
6 else if (age >= 13 && age <= 19) {
7   console.log("Category: Teen");
8 }
9 else if (age >= 20 && age <= 59) {
10  console.log("Category: Adult");
11 }
12 else if (age >= 60) {
13   console.log("Category: Senior");
14 }
15 else {
16   console.log("Invalid Age");
17 }
```

Q5) Classify temperature (Cold, Warm, Hot).

The screenshot shows a web browser on the left and a code editor on the right. The browser's console displays "Hot Temperature". The code editor shows a JavaScript file named "JS Q1.js" with the following code:

```
1 let temp = 45
2
3 if (temp <= 20) {
4   console.log("Cold Temperature");
5 }
6 else if (temp >= 21 && temp <= 30) {
7   console.log("Warm Temperature");
8 }
9 else {
10  console.log("Hot Temperature");
11 }
```
