

Test 1

1. If a webpage has multiple `<h1>` tags, is it correct? Explain from SEO perspective.

Ans:- Yes its correct because of there is no limit for using `<h1>` tags, If webpage is needed multiple main headings then we can use multiple heading tags.

2. What is the difference between `<b>` and `<strong>`? Which one is semantic?

Ans:- `<b>` and `<strong>` both are use to make text bold on the webpage but `<strong>` showin importance and `<strong>` is semantic tag because it have same meaning like `<b>` tag.

3. Write HTML code to display:

A main heading

A paragraph

A bold word inside paragraph

A superscript example

Ans:-

```
<body>
```

```
<h1>Main Heading</h1>
```

```
<p>
```

`<b>` and `<strong>` both are use to make text bold on the webpage but `<strong>` showin importance and `<strong>` is **semantic** tag because it have same meaning like `<b>` tag.

H₂o (subscript)

</p>

</body>

4. What is the difference between and ? When would you use each?

Ans:-

 tag we use it for the when order is not matter

 tag we use it for the when order is matter

5. How do you create a nested list? Write an example.

Ans:-

We can write like this:

Html

Heading tags

Image tag

formatting tag

anchor tag

Or

```
<ul>
```

```
<li>Html</li>
```

```
<ul>
```

```
<li>Heading tags</li>
```

```
<li>Image tag</li>
```

```
<li>formatting tag</li>
```

```
<li>anchor tag</li>
```

```
</ul>
```

```
</ul>
```

6. Explain absolute URL vs relative URL in anchor tag.

Ans:- Absolute URL means Full path of the source file

Relative URL means path from the current or same folder

An email link

A link that opens in new tab

Ans:-

```
<a href="mailto:omkarjaykar23@gmail.com" target="_blank">Sen Email</a>
```

8. What are the required attributes of tag?

Ans:- Two attributes are required for the image tag that is **Src** and **alt**

src is use for the storing the file path and alt is use for the alternative text whenever image will not loaded.

9. What happens if the image path is incorrect?

Ans:-image will not load on the webpage and alternative text will display on the webpage.

10. Write code to insert an image with width 200px and height 150px.

Ans:- `<image src="omkar.jpg" alt="Omkar Image" width="200px" height="150px">`

11. What is the basic structure of an HTML table?

Ans:-

`<table>` (it use for the create structure of table)

`<tr>` (it use for the display row)

`<th>Name</th>` (it use for the Heading)

`<tr>`

`<tr>`

`<td>Omkar</td>` (it use for the display item in the column)

`<tr>`

</table>

12. Difference between <td> and <th>?

Ans:- <th> is use for the heading and it display bold text in the table and <td> display the simple text in the table and it use for display items in the table.

13. What is rowspan and colspan? Give example.

Ans:- row span use for the merge the rows and colspan use for the merege column.

```
<table border="3" cellpadding="10">
```

```
<tr>
```

```
<td rowspan="2">Jaykar</td>
```

```
<td colspan="2">Kanojia</td>
```

```
</tr>
```

```
<tr>
```

```
<td>Omkar</td>
```

```
<td>Krishna</td>
```

```
</tr>
```

```
</table>
```

Ans:- we can this two formula using subscip and superscript

H₂O

X²

18. Can we put a <div> inside <p>? Why?

Ans:-

Basically <div> is user for the containerization and <p> tag use for the store content in the form of paragraph

We can use <div> tag inside <p> tag when we have needed style for some specific content.

19. What is the difference between
 and <p>?

Ans:-
 tag is use for the create space between two lines and <p> tag is use for the display content in the form of paragraph.

20. Create a mini webpage that includes:

Heading

Paragraph

List

Image

Table

Anchor

Iframe

Ans:-

```
<h1>Heading</h1>
```

<p>
 tag is use for the create space between two lines and <p> tag is use for the display content in the form of paragraph.</p>

```
<ul>
```

```
<li>omkar</li>
```

```
<li>Krishna</li>
```

```
<li>Ajay</li>
```

<table>

<tr>

<th>Name</th>

</tr>

<tr>

<td>omkar</td>

</tr>

</table>

Omkar

<iframe src="http://www.google.com">
